

How to install CIPC on Virtual Machines

+++++

Please make sure you have already installed Virtual Machine on VMWARE, Virtual Box etc

Requirements:

- 1) [CIPC setup](#)
- 2) [Virtual Audio Cable](#)

Step 1: Open a Remote Desktop session to your Virtual Machine.

Open **Local Resource Tab** and go to **Configure remote audio settings**

++ In settings choose **Play on this Computer** and **Record from this computer**

For Windows XP: choose "Leave at remote computer";

For Windows 7: Settings => Play on remote computer.

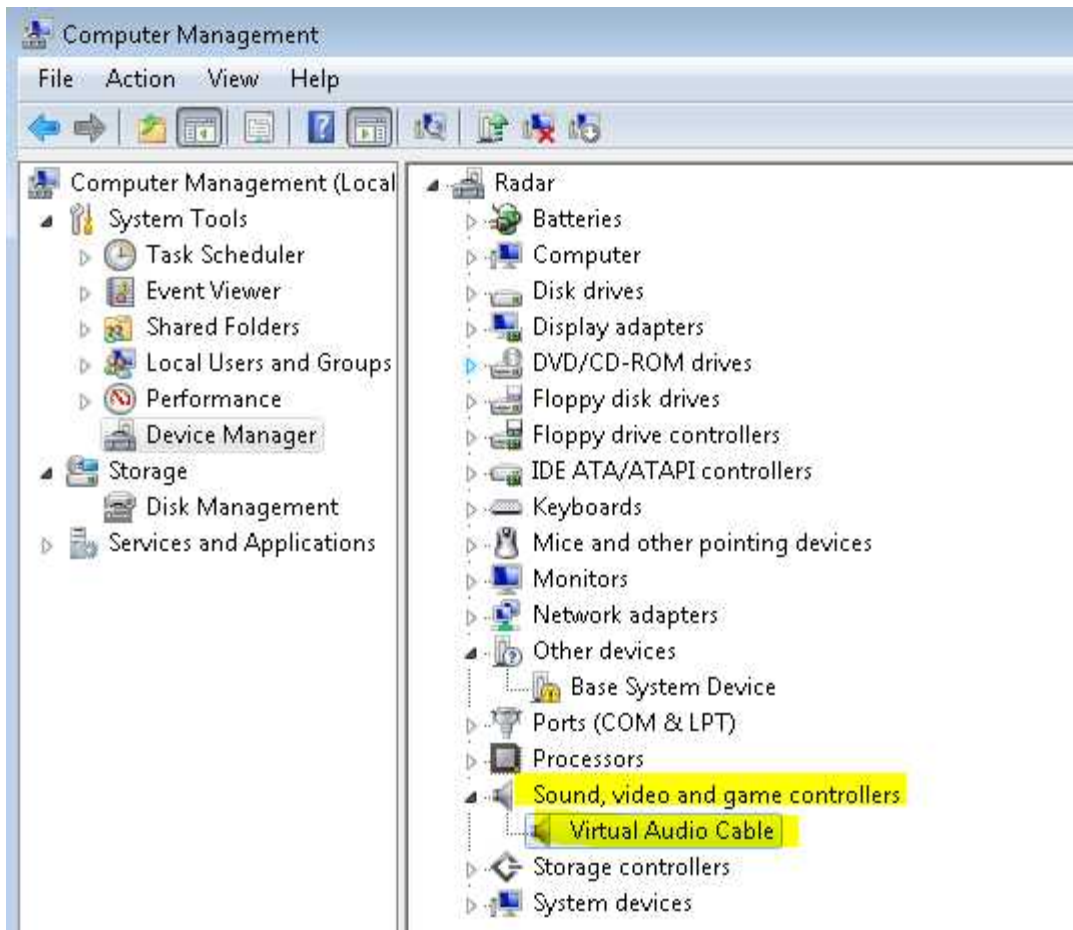

Step 2: Installing Virtual Audio Cable:

++ Extract the **Virtual Audio Cable**

++ Run the setup.exe depending on your system (32-bit and 64-bit both are included in this .rar file)

++ Once the installation is successful. Go to **Device Manager** and check if it has installed correct

Step 3: Installing CIPC:

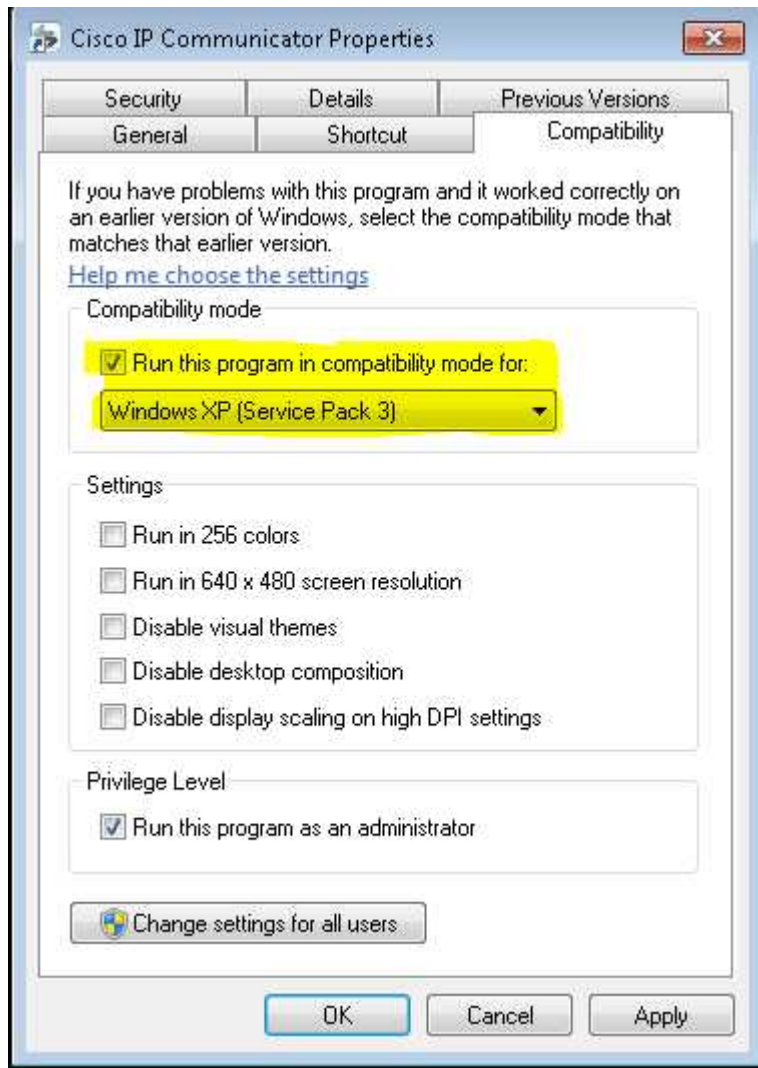

+ Extract the CIPC file that you downloaded.

+ After that reboot the system.

Step 4: Running CIPC:

In **Windows 7** CIPC should be run in **compatibility mode** to be able to use virtual audio cable : **Right click on CIPC shortcut => Properties => Compatibility tab => Check "Run this program in compatibility mode for:" => Windows XP (Service Pack 3)**

So before running the CIPC please make the compatibility to Windows XP (SP3) and run as administrator.

I hope this is helpful.
