Cisco Support Community Expert Series Webcast:

Single and Multi-Site FlexPod infrastructure

Haseeb Niazi Technical Marketing Engineer

September 18th 2013

Cisco Support Community – Expert Series Webcast

- Today's featured expert is Cisco Technical Marketing Engineer
- Ask him questions now about FlexPod

Haseeb Niazi

CCIE in Routing and Switching

Topic: Single-Site and Multisite FlexPod Infrastructure

Panel of Experts

Derek Huckaby Technical Marketing Manager

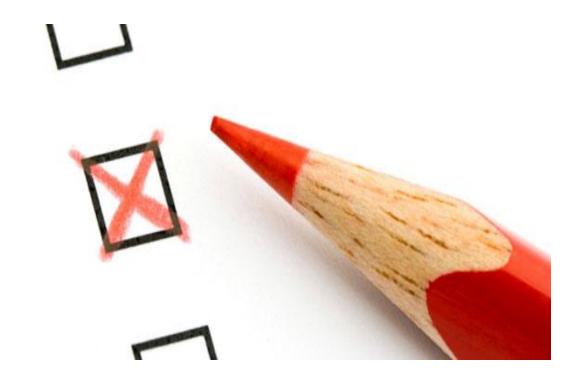

David Klem Sr. Reference Architect, NetApp Infrastructure & Cloud Engineering Team

Thank You for Joining Us Today

Today's presentation will include audience polling questions

We encourage you to participate!

Thank You for Joining Us Today

If you would like a copy of the presentation slides, click the PDF link in the chat box on the right or go to

https://supportforums.cisco.com/community/netpro/data-center/unifiedcomputing

Or, https://supportforums.cisco.com/docs/DOC-36218

Polling Question 1

How many of you know about FlexPod?

- a) I have heard about FlexPod but am not sure what it is
- b) I know about FlexPod but do not know about various flavors of FlexPod.
- c) I am considering deploying a FlexPod in our environment.
- d) I'm running FlexPod in our production Data Center.

Submit Your Questions Now!

Use the Q&A panel to submit your questions. Experts will start responding those

Cisco Support Community Expert Series Webcast:

Single and Multi-Site FlexPod infrastructure

Haseeb Niazi

Technical Marketing Engineer

September 18th 2013

Agenda

- FlexPod Overview
- FlexPod Single Site Infrastructure

Core components

Design Details

FlexPod Multi Site Infrastructure

Design Details

Resiliency

FlexPod Management

FlexPod Overview

Motion to Converged Infrastructure

- Agility Time to service market
- Cost advantages and efficiency
- Infrastructure and operations improvements
- Moving from IT maintenance to IT innovation

- Better performance
- Improved cost/performance ratio
- Simplified deployment
- Increased automation

FlexPod – Delivering Unified Data Center

Cisco UCS™ B-Series or C-Series and Cisco UCS Manager

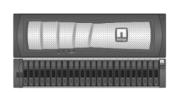

Cisco Nexus® **Family of Switches**

Nexus 5000 & 7000

NetApp® FAS **OnCommand™ Software Suite 10GE and FCoE**

Features

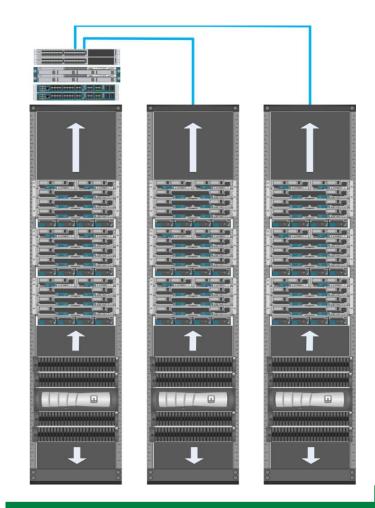

- Standard, pre-validated, best-in-class converged platform:
- Virtualized and non-virtualized environments
- **Flexible**: Future-proof platform to meet today's challenges and scale for future needs

Benefits

- Choice
- Availability: ISSU, DCI, and Non-disruptive **Operations**
- Scalability: Highest Density 10/40/100GE in a modular chassis, virtualization support
- Validated DC Technologies: multi-hop FCoE, VPC, OTV, VDCs, unified ports
- **Reduced risk:** Validated architecture with prescriptive sizing and design guides resulting in lower total cost of ownership (TCO)

Scale Out with FlexPod

- Scale out with standard and proven configurations:
 - Predictable and highly efficient:
 - Capacity and performance
 - Floor space, power, and cooling
- Benefits:
 - Reduce effort for architecture, design, deployment, and testing
 - Reduce infrastructure deployment cycle time by up to 50%
 - Manage pools consisting of storage, compute, and networking resources, not individual systems

Increased performance and capacity

FlexPod - Accelerate the Business

Service Request

Traditional

Many Weeks or Months Available Detailed Design and DC **Procure Deploy Test Planning** Size Design X **Service Available** > 50% Faster DC Deploy Test **Planning**

With FlexPod™

Reference BoM Validated design Precise deployment Standard test plan

Preprovisioned FlexPod

Rapid deployment of applications Shared pools meet most requirements

DC Planning Procure Deploy Test

Benefits

Agile service delivery

Service

- Higher productivity
- Faster deployment
- Higher quality
- Simpler planning

© 2013 Cisco and/or its affiliates. All rights reserved.

Service

Available

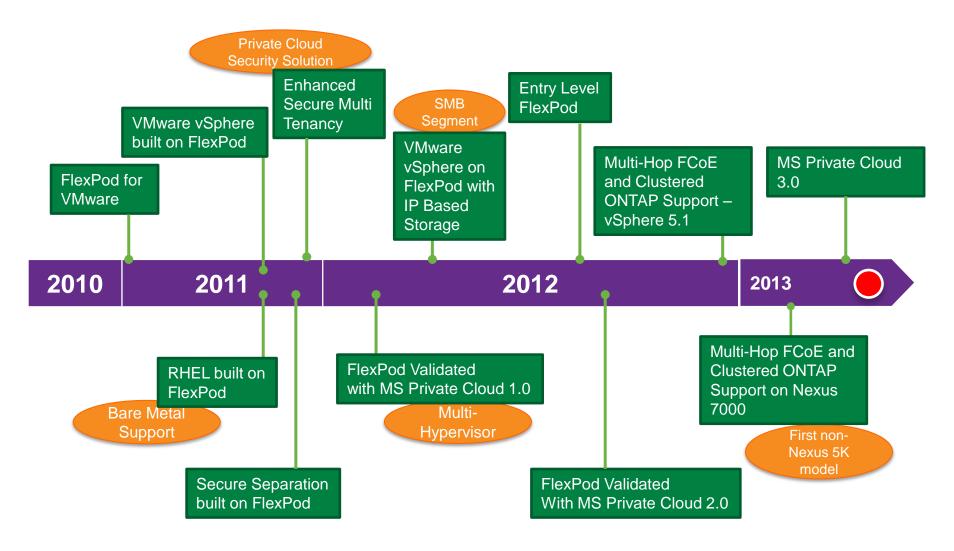

FlexPod Detailed Deployment Collateral

- Detailed design guidance and use case examples
- Step-by-step instructions for repeatable high-quality deployments, including these use cases:
 - FlexPod
 - **Desktop Virtualization**
 - SAP® applications
 - Microsoft® applications

Step by step cabling and configuration guidance provided provided for all FlexPod implementation models

Evolution of FlexPod Designs

FlexPod Single Site Infrastructure

Polling Question 2

How many of you use Cisco Unified Compute System (UCS)?

- a) I don't know what UCS is.
- b) I know about UCS but am not sure if I need it.
- c) I am evaluating UCS and work on it on a daily basis.
- d) I have production workloads running on a UCS

Technical Design Requirements

Cisco Design Principles

- Operational continuity/HA
- Transport flexibility such as FC, Ethernet/FCoE, and Overlay Transport Virtualization (OTV)
- NX-OS for scalability

NetApp Design Principles

- Operational continuity/high availability (HA)
- Access flexibility such as Fibre Channel (FC), Fibre Channel over Ethernet (FCoE), and network-attached storage (NAS) protocols
- NetApp® Data ONTAP® for scalability

Flexing a FlexPod Configuration

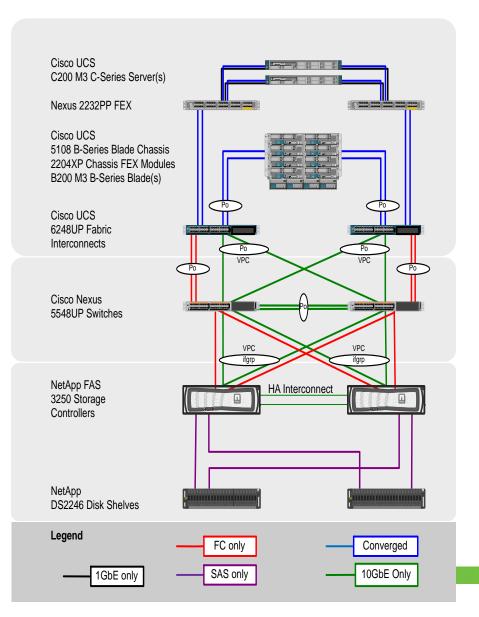

Required Components

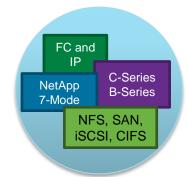

- Cisco Unified Computing System[™] (Cisco UCS[™]) chassis or integrated rack mounts
- Cisco UCS blades or integrated rack mounts with VIC adapter
- Redundant Cisco UCS FIs
- Redundant Cisco Nexus[®]
 Switching
- Redundant NetApp® FAS
- Certain software and redundancy features

Flexible Components

- Cisco UCS blade or integrated rack mount model and quantity
- Port count of Cisco Nexus Switching
- Fabric-attached storage (FAS) controller size
- Number of FAS controllers in a clustered environment
- FAS disk type, count, and size
- Add-on cards, modules, and interfaces

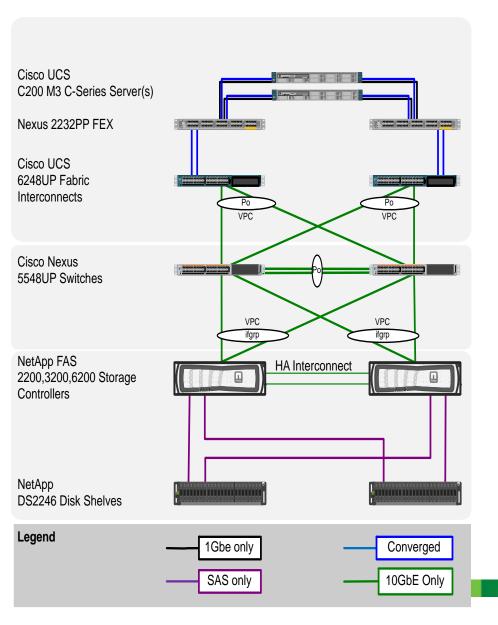

Dedicated Fibre Channel design

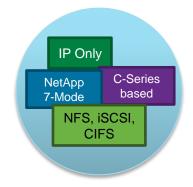

- First model of FlexPod
- Fully redundant configuration
 - vPC for Ethernet Traffic
 - FC Port Channels maintaining SAN A/B isolation
 - FC direct links form "A" and "B" targets on the controller
- Nexus 5500s provide zoning functionality
- NetApp Controllers form an HA pair

Entry-Level IP Only Design

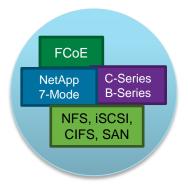

- Documented as C-Series only
 - Typical size 4-6 rack mounts
- Right-sized for smaller workloads
- No Fiber Channel Present, Ethernet only fabric
- iSCSI, NFS, CIFS fully supported

iSCSI boot

PXE boot*

FCoE and NetApp 7-Mode

Discrete Uplink Model highlights:

UCS in End Host Mode

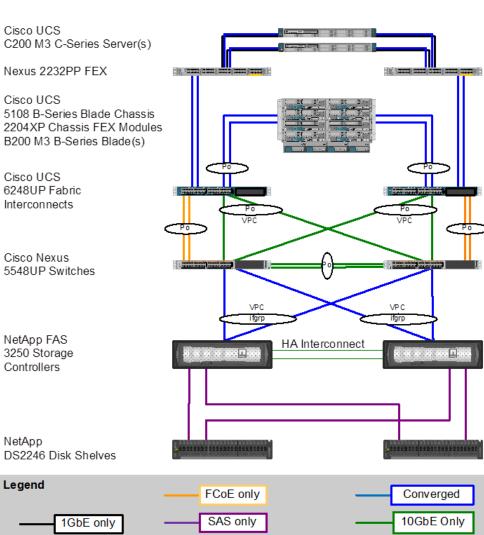

FCoE port channels offer link fault tolerance and improved aggregate bandwidth

vPC provides link and device fault tolerance with increased aggregate bandwidth

Mimics traditional SAN deployment

Benefits include

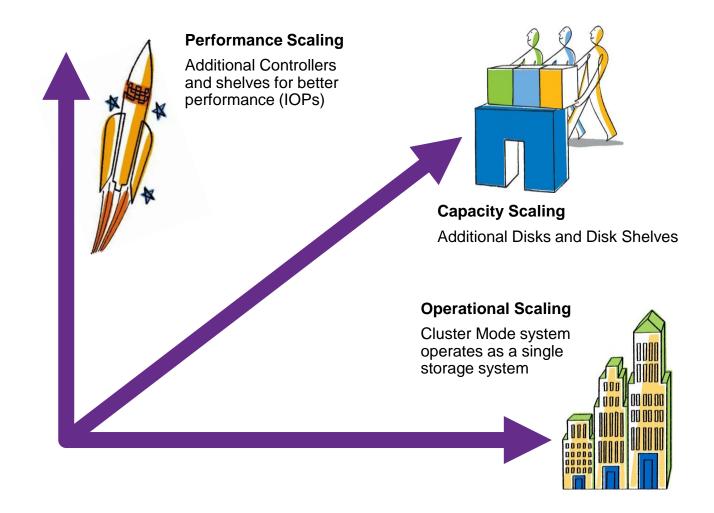

Infrastructure consolidation Simplified operational model Operational efficiencies

Increasing FlexPod Single Site Infrastructure Scalability and Performance

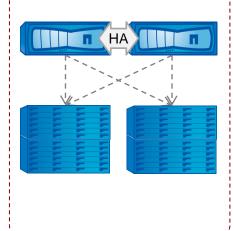

Scalability with Clustered Data ONTAP

Clustered Data ONTAP Overview

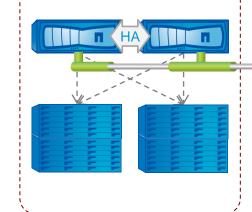

Note: Cluster Interconnect Supported on Nexus 5010, 5020 and 5596 platforms

> Active/Active Pair (HA)

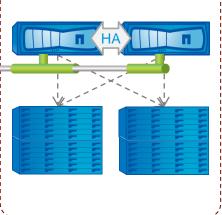

Still Have Active/Active Pairs + 10 GbE Cluster Inteconnect

Storage Failover Pair (SFO)

Storage Failover Pair (SFO)

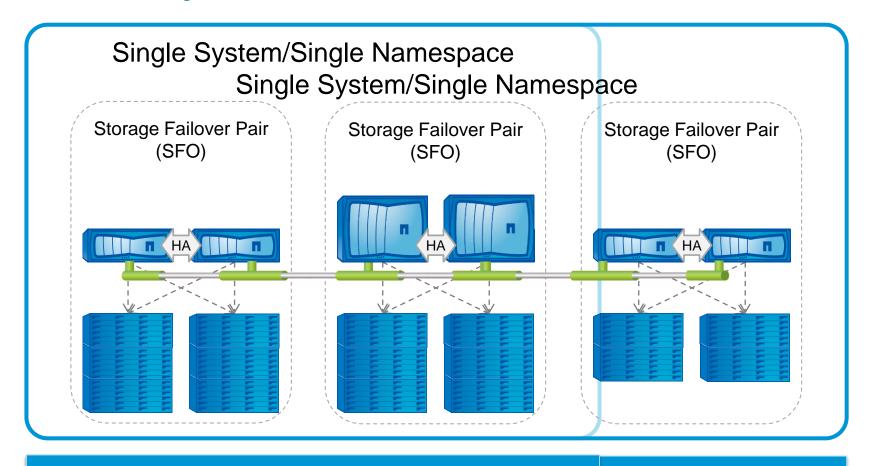

Single System/Single Namespace

7-Mode

Clustered ONTAP

Clustered Data ONTAP Scalability

Clustered ONTAP

FlexPod Scalability (Nexus 5000)

Scale up to a total of 20 pairs of Cisco FEXs

B-Series Blade Chassis 2200 FEXs Nexus 2000 FEXs

 Scale up to a total of 160 UCS servers

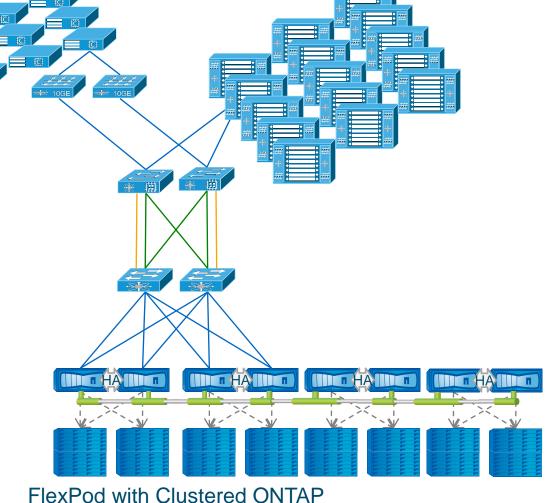

B-Series Blade Servers

C-Series Rack Mount Servers

 Scale up to a total of 24 NetApp FAS Controllers

NAS only = 24 nodes

SAN and NAS = 6 nodes (today)

FCoE and NetApp Clustered Data ONTAP

Single wire from the UCSM for C-Series M3 servers Effectively doubling the server density

per I/O module while reducing cabling

5108 B-Series Blade Chassis 2204XP Chassis FEX Modules

B200 M3 B-Series Blade(s)

Requires the VIC 1225 adapter

Nexus 2232PP FEX

Cisco UCS

Cisco UCS

Cisco Nexus

NetApp FAS

Controllers

3250 Storage

Nexus 5596. Nexus 5010 and

Nexus 5020 are certified for the cluster interconnect role.

5548UP Switches

6248UP Fabric Interconnects

Discrete Uplink Model highlights:

UCS in End Host Mode for Ethernet and Fibre Channel (NPV) traffic FCoE port channels offer link fault

tolerance

and improved aggregate bandwidth

vPC provides link and device fault tolerance

with increased aggregate bandwidth

Mimics traditional SAN

Benefits include

Infrastructure consolidation Simplified operational model Operational efficiencies

Configuration mandated by NetApp

NetApp DS2246 Disk Shelves

FCoE only

1GbE only

SAS only

Converged

10GbE Only

HA Interconnect or or or over Those

FCoE

NFS. iSCSI.

CIFS, SAN

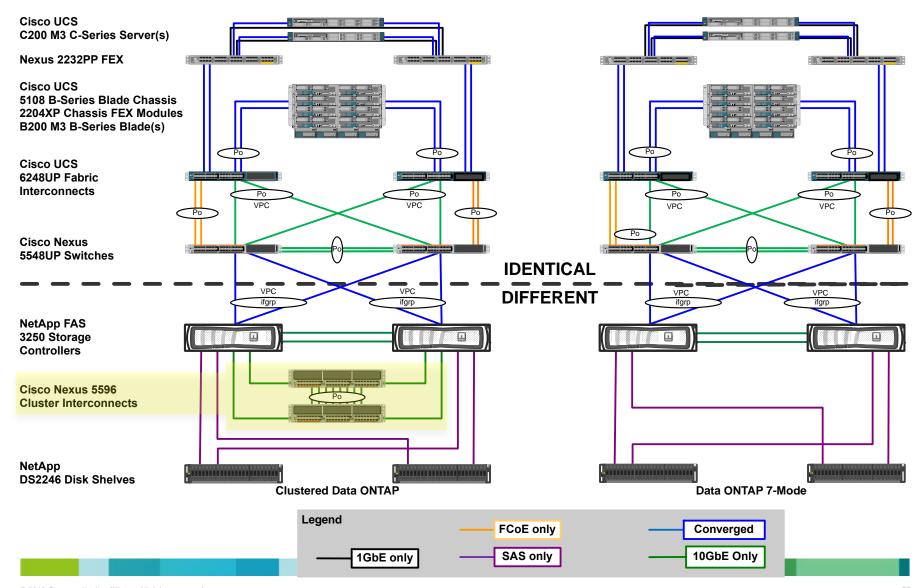

NetApp

C-Mode

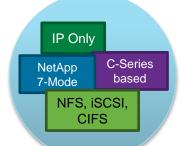

C-Series

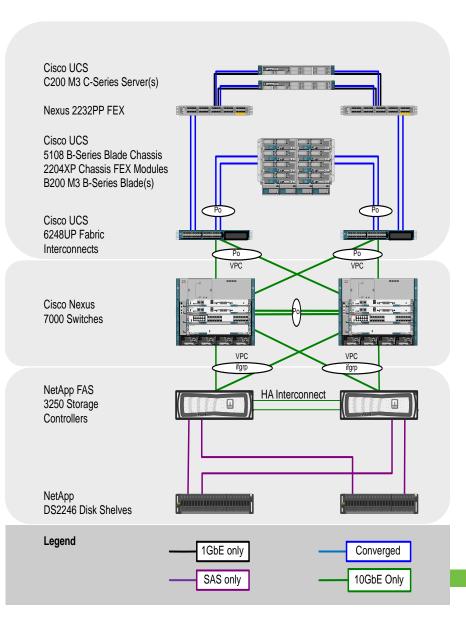

B-Series

Comparing 7-Mode and C-Mode based Deployment Models

Increased Scale with Nexus 7000

 Introduction of the Nexus 7000 switch family into the FlexPod solution

M2 and Sup2 line cards validated

- IP only solution
 iSCSI documented for boot
 Readily integrates into
 environments with existing
 SAN
- ISSU & SSO Enables Zero Packet Loss upgrades
- vPC for link fault tolerance and improved utilization

FCoE with Nexus 7000 NetApp 7-Mode and

C-Mode

7-Mode C-Series B-Series

NFS, iSCSI, CIFS, SAN

- Nexus 7000 based FlexPod with Sup2, M2 and F2 line cards
- End-to-end FCoE support
- Clustered Data ONTAP and Data ONTAP operating in 7-Mode validated
- Unified Port support for FCoE Multi-Hop with UCS 2.1
- All 10 GigE Environment

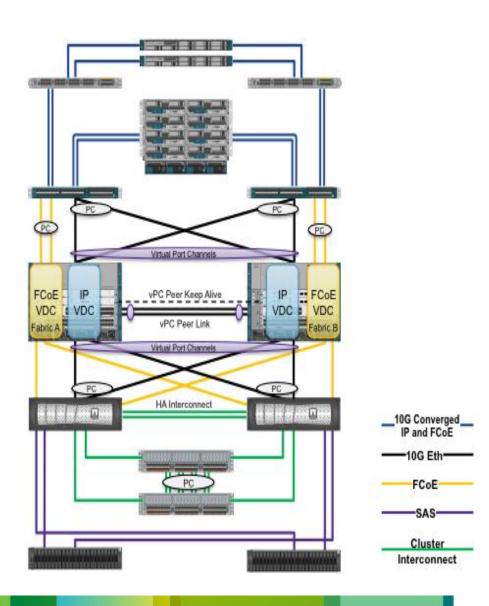

Nexus 7000 FCoE Design Considerations

- Use Nexus 7000 storage VDC in NPIV mode
- UCS FI FCOE uplink ports must only carry FCoE traffic (storage traffic only; no IP traffic)
- Use FCoE port-channel between UCS FI and Nexus 7000 storage VDC

For high resiliency, dispatch portchannel member ports across 2 different LC

FCoE Port-channel can contain up to 16 member ports

- FCoE VDC to NetApp uses dedicated links
- Implement SAN A / SAN B topology (dedicated VLAN per VSAN)

FlexPod Multi-Site Infrastructure

Polling Question 3

Are you using a multi-site Disaster Recovery (DR) solution today?

- a) We do not require multi-site DR
- b) We are using Cloud for DR
- c) We are thinking about setting up a DR site and are planning on using NetApp metro-cluster solution
- d) We are thinking about setting up a DR site and are planning on using a non-Metro-Cluster DR solutions

Multi-Site FlexPod with NetApp MetroCluster

- The introduction of stretched clustering into FlexPod provides the following benefits:
 - Workload mobility
 - Cross-site automated load balancing
 - Enhanced downtime avoidance
 - Disaster avoidance
- The system will be comprised of the following components:
 - vSphere 5.1
 - UCS Release 2.1
 - Nexus 7000 running NXOX 6.1.2
 - NetApp Data ONTAP 8.2 in 7 Mode, MetroCluster enabled with Cisco MDS Switch.

Nexus 7000 Based Single Site Design

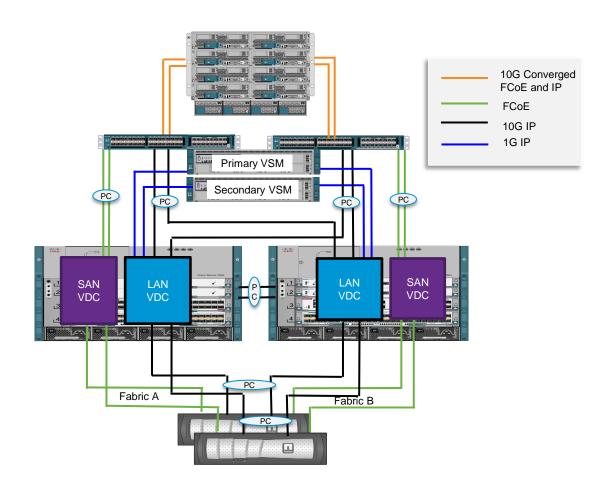

UCS B-Series Servers

UCS 6200 Fabric Interconnects

Nexus 1110 hosting Nexus 1000v

Nexus 7000 Chassis Supervisor 2E 10G M2 and F2/F2e Line Cards

NetApp FAS 22xx NetApp FAS 32xx NetApp FAS 62xx

Multi-Site FlexPod Physical Infrastructure

UCS B-Series Servers

UCS 6200 Fabric Interconnect

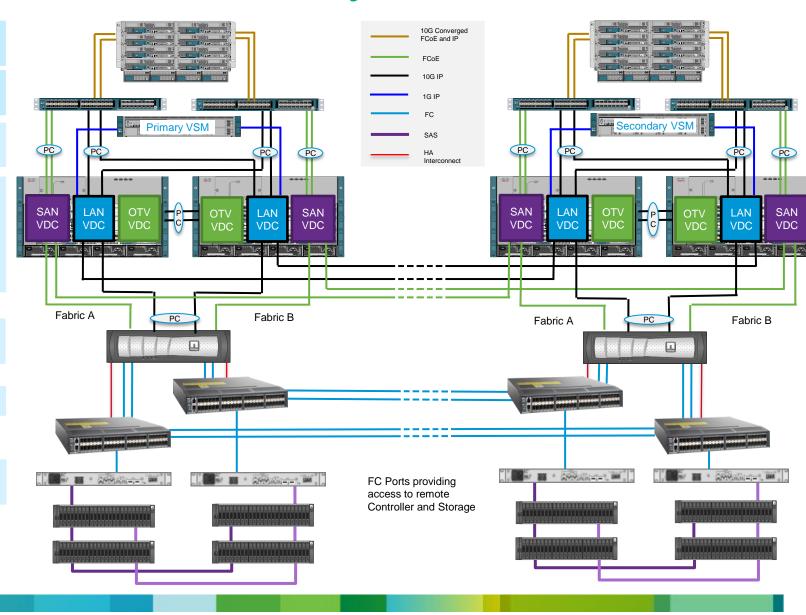

Nexus 1110 hosting Nexus 1Kv

Nexus 7000 Chassis Supervisor 2E 10G M2 and F2/F2e Line Cards

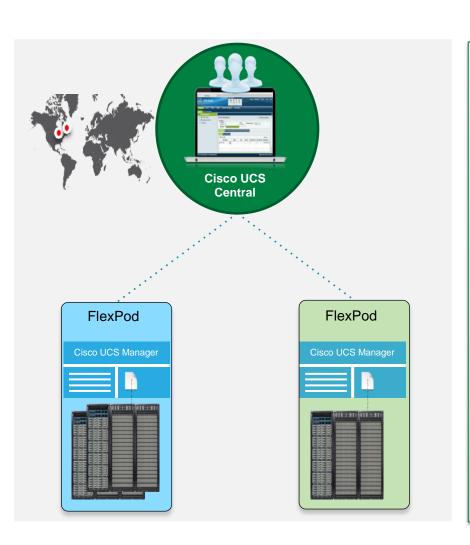

NetApp Fas 32xx NetApp Fas 62xx

MDS 9148

ATTO FibreBridge 6500N

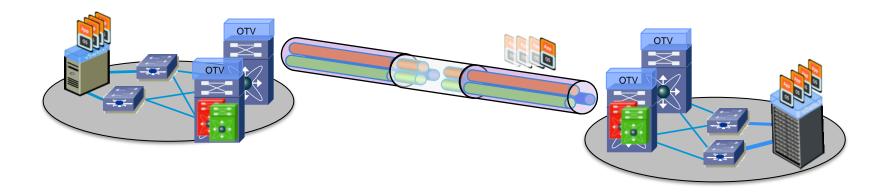

UCS Central – Managing multiple UCS Domains

Cisco UCS Central

- Unifies management of multiple Cisco UCS domains
- Leverages Cisco UCS Manager technology
- Simplify global operations with centralized inventory, faults, logs and server console
- A virtual machine based software solution that runs on ESX or Hyper-V hypervisors
- Automatically pull firmware updates into UCS Central and in turn UCS Manager reducing administrator overhead
- Foundation for high availability, disaster recovery and workload mobility

Overlay Transport Virtualization (OTV)

Overlay - A solution that is independent of the infrastructure technology

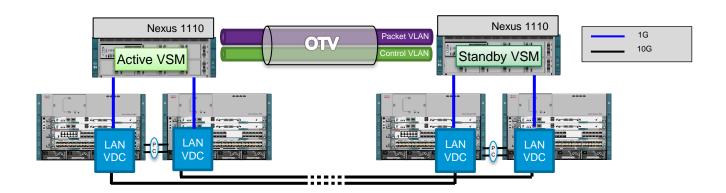

Transport - Transporting services for layer 2 and layer 3 Ethernet and IP traffic

Virtualization - Provides virtual connections, connections that are in turn virtualized and partitioned into VPNs, VRFs, VLANs and Bridge Domain instances

- OTV provides customers with resource flexibility and workload portability that span across geographically dispersed data centers
- VMware vMotion™ can now leverage Cisco OTV to easily and cost-effectively move data center workloads across long distances

Nexus 1000v Multi-Site Deployment

Multi-Site Deployment Highlights

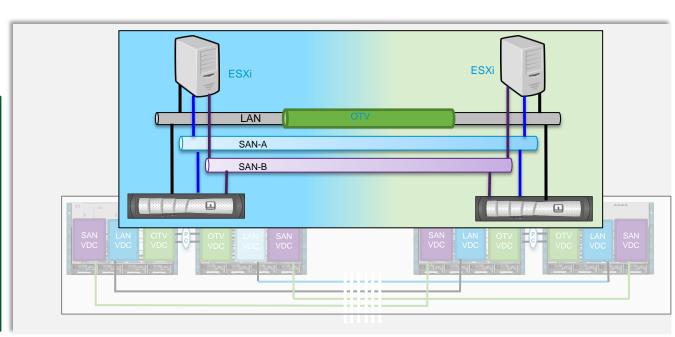

- Virtual Supervisor Module (VSM) is split across DCs
- VSM is hosted on Nexus 1110
- Layer-2 extension, needed for VSM management and control VLANs, is provided by OTV
- Max supported latency of 10ms between active and standby VSMs

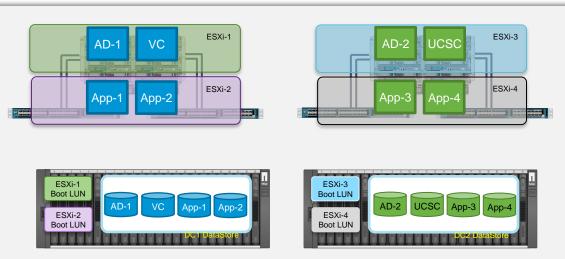

Scale (latest)

- 128 Hosts/VEM's per Distributed Virtual Switch (DVS)
- 300 Virtual Ethernet (vEth) ports per Host
- 4k vEth ports per Nexus 1000v DVS

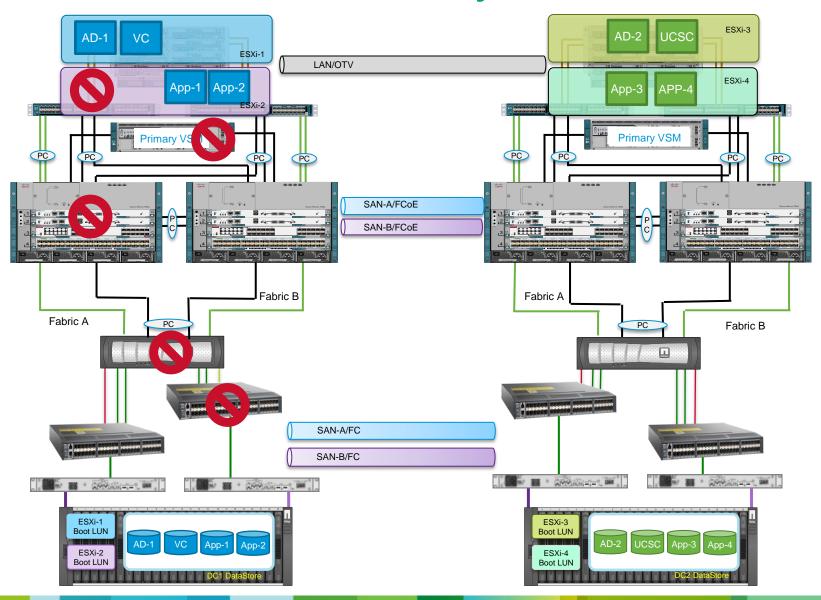

Multi-Site FlexPod Logical Layout

- LAN traffic is extended across the DCs using OTV
- FCoE connections between the two sites extend SAN-A and SAN-B
- Multi-Hop FCoE connections between sites enable hosts to talk to both controllers
- Create a VM Placement strategy
 which VMs belong to a particular DC
- Create VM to Host Affinity Rules in VMware DRS/HA
- Use Site Specific DataStores to host VM Disks for low latency

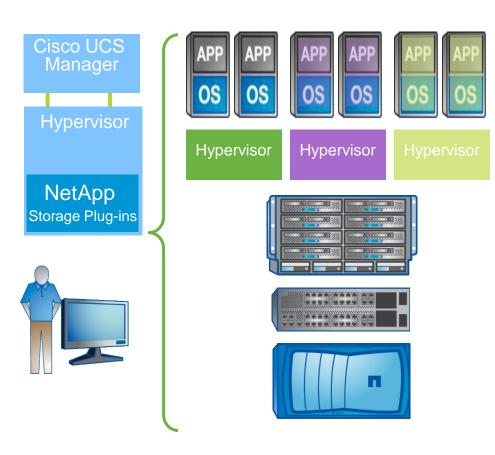

Multi-Site FlexPod - Fully Redundant Infra.

FlexPod Management

Centralize and Open Management

- Integration with Hypervisors
 Automate workflows, scalable, extensible platform
 Hypervisor agnostic
- Cisco® UCS Manager
 Embedded unified management

 Integrated with vCenter
- Cisco UCS Central
- NetApp® OnCommand™ Management Software

Integration with Unified Manager for provisioning, protection, automation

VMware vCenter Server or MS System Center

Manage NetApp heterogeneous environment

Extensible Management APIs

Cisco Cloupia – UCS Director

Deploy

- Add tenants
- Migrate or add applications
- Deploy
 Resources via
 Self-service UI

Operate

- Monitor performance Trends
- Refine policies
- Set granular access rules

Plan

- Release resources
- Add capacity
- Lifecycle management

Cisco UCS Director

Q&A

Expert responding some of your questions verbally. Use the Q&A panel to continue asking your questions

Ask The Experts Event

(with Haseeb Niazi and Chris O'Brien)

If you have additional questions, you can ask Haseeb and Chris. They will be answering from September 18 - 27, 2013 https://supportforums.cisco.com/thread/2238067

You can watch the video or read the Q&A 5 business days after the event at

https://supportforums.cisco.com/community/netpro/ask-the-expert/webcasts

Trivia Question (select the correct answer)

What do Ford Motors and FlexPod have in common?

- A. Both Ford Motor Company and FlexPod were started with two separate companies coming together to form a partnership?
- B. FlexPod is in 35 countries worldwide as many countries as Ford Motor Company cars are in.
- C. On July 30, the founder of Ford Motor Company, Henry Ford, was born and on July 30, 2013 Cisco and NetApp broadened the FlexPod portfolio with new validated designs across the entire portfolio.

We Appreciate Your Feedback!

Those who fill out the Evaluation Survey will be entered into a raffle to win:

\$50 Amazon Gift Card

To complete the evaluation, please click on link provided in the chat or in the pop-up once the event is closed.

October Expert Series Webcast - Portuguese

Topic: Data Center Virtualization Fundamentals

Thursday, October 3, 2013
11:00 a.m. Brasilia City
3:00 p.m. WEST Lisbon
7:00 a.m. San Francisco
10:00 a.m. New York City

Join Cisco Expert:

Gustavo Santana

During this live event, the expert Alejandra Gonzalez will present a technical view of the motivations, methods and technologies used in this June 2013 Cisco Press publication.

Register for this live Webcast at:

http://tools.cisco.com/gems/cust/customerSite.do?METHOD=E&LANGUAGE_ID=P&SEMINAR_CODE=S18997&PRIORITY_CODE=

October Expert Series Webcast - Russian

Topic: Cisco ASR 9000 Series Aggregation Services Routers Platform Architecture and Packet-Forwarding Troubleshooting

Tuesday, October 8, 2013 12:00 p.m. Moscow Time

Join Cisco Expert:

Anatoly Tsyganenko

During this live event, the expert Anatoly Tsyganenko will provide an in-depth discussion of the Cisco ASR 9000 Series Aggregation Services Routers.

Register for this live Webcast at:

http://tools.cisco.com/gems/cust/customerSite.do?METHOD=E&LANGUAGE_ID=R&SEMINAR_CODE=S19036&PRIORITY_CODE=

Ask the Expert Events – Current English

Topic: Best Practices for Implementing Cryptographic VPN

Join Cisco Expert: Marcin Latosiewicz

Learn and ask questions about implementing cryptographic VPN and how to prepare it for the future.

Ends September 20

Topic: Managing Controllers with Cisco Prime™

Join Cisco Expert: Aunudrei Oliver

Learn and ask questions about how to manage controllers with Cisco Prime™

Ends September 20

Join the discussion for these Ask The Expert Events at:

https://supportforums.cisco.com/community/netpro/expert-corner#view=ask-the-experts

Ask the Expert Events – Upcoming English

Topic: Still Facing Challenges of Designing, Deploying, and Troubleshooting Wireless Networks?

Join Cisco Expert: Flavien Richard

Learn and ask questions about how to overcome the challenges of planning, designing, deploying, and troubleshooting wireless networks.

Starts September 23

Topic: Configuring and Troubleshooting Border Gateway Protocol (BGP)

Join Cisco Expert: Sandeep Sharma

Learn and ask questions about issues encountered while configuring and troubleshooting Border Gateway Protocol (BGP) across various Cisco platforms.

Starts September 23

Topic: Wireless LAN Security

Join Cisco Expert: **Jeal Jimenez**

Learn and ask questions how to implement, configure and troubleshoot WLAN security

Starts October 7

Join the discussion for these Ask The Expert Events at:

https://supportforums.cisco.com/community/netpro/expert-corner#view=ask-the-experts

Google Hangout – Introduction to Cisco on Demand Solutions

Topic: Cisco on Demand Introduction Series – Session 1

Join Vidhya Srinivasan, Senior Manager, Cisco Services

CISCO

7-Mode or Cluster Mode based FlexPod?

Data ONTAP® 7-Mode

- Existing FlexPod customers leveraging Data ONTAP 7G and/or Data ONTAP 8.x 7-Mode who are looking to upgrade
- Customers requiring an application that has not yet been validated with FlexPod and clustered Data ONTAP
- Midsize to small enterprises: seeking small scale, entry-level solutions
- Customers requiring features not yet available in clustered Data ONTAP; SnapVault[®], SnapLock[®], etc.

Clustered Data ONTAP®

- Existing FlexPod customers leveraging Data ONTAP 7G and/or Data ONTAP 8.x 7-Mode who are looking to transition to clustered Data ONTAP
- Large to midsize enterprises: seeking scalable, shared IT solutions for nondisruptive operations
- Current clustered Data ONTAP customers interested in building a FlexPod
- New FlexPod customers and new FlexPod installations at existing accounts

Transition to Clustered Data ONTAP

Best Practices

Gotchas and Best Practices

For vMSC, VMware recommends:

Set VMware HA Admission Control Policy to 50%

Create two DataStores and use DRS in each DC

Use four DataStores for heartbeat

Configure Additional Isolation Addresses

Set das.maskCleanShutdownEnabled to True

Define VM to Host Affinity Rules

- OTV adds a 42 byte overhead to every packet
- AD should be distributed across the two sites and vCenter should be able to use either Domain Controller
- When using both UCS Manager and UCS Central concurrently, use unique names and values for global policies, templates and pool. Adding a prefix before name ("G") is common.
- Boot from SAN policies and zoning should include both local and remote controller WWPNs.
- Ensure cf.takeover.change_fsid option is set to "off" on the NetApp controller

Best Practices for UCS

- Use UCS Fabric Interconnect in End Host Mode
- Leverage Service Profiles for stateless computing (SAN or iSCSI boot)
- UCS-Manager Templates; Initial vs. Updating
- Chassis/FEX Discovery Policy (use port channeling)
- Enable Jumbo Frames
- Wire once for bandwidth today and tomorrow
- VIC for virtual interfaces to the OS / Hypervisor

Best Practices for Network

- Enable Jumbo Frames and CDP
- Disable Ethernet Flow Control
- Use LACP IFGRPs where possible, and leverage vPCs
- Use VLANs/VSANs to separate traffic types
- Configure port-channels and vlan trunking on most ports
 Allows for seamless addition of vlans or ports
- Use QoS to prioritize important traffic
- Zoning for FC/FCoE

Best Practices for Storage

- Utilize one to many Vservers
- Add controllers to storage cluster in SFO pairs
- Configure LIFs to auto failback
- Set up LIF failover groups between SFO pairs
- Maintain locality for LIFs and volumes
- Leverage dynamic multi-mode (LACP) Interface Groups
- Single Initiator Zoning

Best Practices for FlexPod

- Redundancy end-to-end, multi-home where applicable and use multiple physical connections
- Enable secure protocols (SSL, SSH) with minimum 1024 key size
- Utilize LACP
- Enable Jumbo Frames
- Enable CDP and NTP
- Leverage validated workload best practices if available
