

Cloud delivered Security service for branch office - Cisco Umbrella Branch

Provide first layer of defense at your branch site location by leveraging Cisco Integrated Services Router (ISR) 4000 series routers. Studies have shown that branch locations are experiencing more diversity in mobile devices, user application needs, cloud usage thus creating a move to more direct Internet access. With Cisco Umbrella Branch, you can easily enforce security at the DNS and IP Layer, blocking requests to malicious domains and IPs before a connection is ever made. Achieve this layer of security with no additional hardware!

Protecting your business from Email based attacks - Email Security Solution

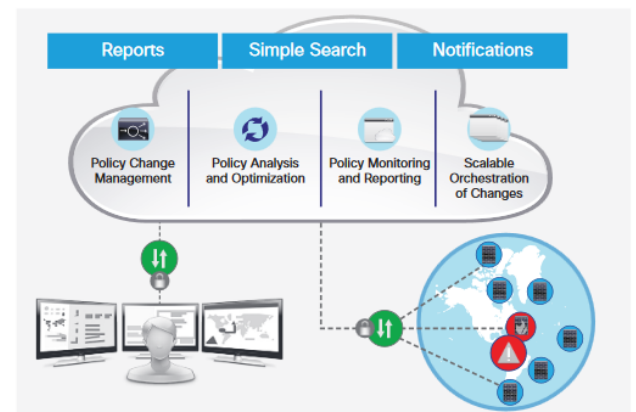

<http://cs.co/90058wU1U>

Email is a critical business communication tool, but that makes it a top cyber-attack vector. Cyber criminals are more creative than ever in their tactics, coming up with new and inventive ways to breach networks whether it's through phishing, spoofing or ransomware causing millions in losses to businesses. Cisco's email security solution can provide multiple layers of security to weed out threats by combining both machine and human intelligence. Cisco's unique Context Adaptive Scanning Engine (CASE) analyzes messages using anti-spam filtering, graymail detection, and threat outbreak filters. Furthermore Cisco Advanced Malware Protection (AMP) augments malware detection with file retrospection for a continuous analysis of threats.

Strengthen Your Security Posture with Simplified Policy Management — Cisco Defense Orchestrator

Managing policies across distributed security devices is complex, time consuming and could create gaps and risks. Cisco Defense Orchestrator is a cloud-based management application that takes the hassle out of policy management across Cisco security devices. Cisco Defense Orchestrator helps network operations team easily manage policies across security products such as Cisco Next-Generation Firewalls and NGIPS, including Advanced Malware Protection, and Cisco Umbrella.

Understand and prioritize threats faster - Cisco Threat Grid

Integrated into Cisco Security portfolio is Thread Grid, which combines advanced sandboxing with threat intelligence to protect organizations from malware. With a robust, context-rich malware knowledge base, you will understand what malware is doing, or attempting to do, how large a threat it poses, and how to defend against it. Threat Grid allows customers to understand and respond to threats faster, identify key behavioral indicators of malware and its campaigns and provides deep malware analysis.

Webinars:

- **March 31 - Protecting Critical Infrastructure with Cisco ISA3000 - [Register Now](#)**

The adaptation of new technology in Industrial networks improves efficiency in the production environments but also leads to security challenges. Today's industrial networks need advanced threat protection and ruggedized solution that helps to ensure safe, reliable service delivery.

- **April 7 - Firepower 2100 - [Register Now](#)**

Unlike complex legacy NGFWs, the fully integrated Cisco Firepower NGFW delivers visibility, control, and automation for effective and simpler threat defense. Learn about Cisco's latest edition of Firepower NGFW and its threat intelligence correlation from across the network, endpoint and cloud in a single integrated platform.
