**campaign loading** Feb 6, 2017 12:50 PM

Is there a way to automate campaign loading. We anticipate over 100 campaigns a day, and am wondering how to best load all 100?

Thanks in advance (I hope),

Joe

There are REST APIs available for configuring campaigns. What do you mean by 'campaign loading'?

If you meant 'enabling campaign', then you may invoke PUT on the API <http://<server>/adminapi/campaign/{id}/state/{enable or disable}>.

If you meant 'importing contacts', then you may invoke POST on the API <http://<server>/adminapi/campaign/{id}/contacts>.

You may refer to 'campaign' section of [Cisco DevNet: Express Configuration API - Overview](#) API guide for more information.
