CCX resource API not responding Jul 27, 2017 12:29 AM

Hi, I am working on CCX 11.5 APIs. Everything was working fine till yesterday. I don't know what went wrong with resource API. Everything else is working fine but I am not able to get the list of resources through API call, however I am getting success response in all the other API calls

This is the error message I am getting in case of <http://uccx-server/adminapi/resource>

```
<apierrors><apierror><errordata>ServerError</errordata><errortype></errortype></apierror></apierrors>
```

Re: CCX resource API not responding Aug 3, 2017 12:33 AM

Hello this is bug in CCX. When you add slash to end of request you get list without problems. (<http://uccx-server/adminapi/resource/>)

Thanks for your response. But unfortunately, this gave me the same error.

Error occurs only for resource API (when getting list of resources).

Everything else work perfectly fine.
